Shaw Studios Movie City Complex

The prestigious Shaw Studios Complex is one of the world's most technologically advanced film and digital production facilities.

Located in Tseung Kwan O, Hong Kong, the complex is owned by Shaw Property Holdings, covers 1.2 million square feet and features an administration building, a two-story film processing centre, a world class 400-seat theatre, 5 large sound stages and a digital post-production centre housing 18 suites for recording and editing.

To secure Shaw Studios the client chose the CEM AC2000 access control and security management system. This formed part of a Central Building Management System and was installed by ADT Hong Kong.

CASE SUMMARY

Location:
Hong Kong

Systems Installed:
AC2000 access control

AC2000 Alarm Event Display (AED)

Hardware Installed:
CEM Etherprox Readers

Introduction

The AC2000 system is a powerful and fully integrated access control, alarm processing and photo badging system. With CEM manufacturing both the system hardware and software, AC2000 can be further customised to meet client's unique requirements. CEM offer an integrated solution that allows customers to manage their unique security situation.

Solution

AC2000 comes with a suite of applications creating a powerful operational solution. Software modules include Guard Tours, Alarm Event Display (AED), Integrated Photo Badging (VIPPS), Visitor Management and many more.

The client found the choice of sophisticated modules perfect for Shaw Studios. Modules such as AED were very useful as the site was spread out over a number of buildings. This allowed security personnel to view a complete graphical and textual representation of the status of the entire system. AED responds to all alarm situations in real time providing a dynamic on-screen interface to external CCTV systems. The client choose CEM EtherProx readers. The industry's smallest Ethernet card reader with integrated keypad, LCD display and internal database giving offline validation and intelligent decision making at the point of entry, even when host communications are not available.

The reader is designed for use as part of the CEM AC2000 system and displays messages of up to 32 characters such as 'Access Granted'. Entry can also be displayed through the LED indicators to visually confirm or deny entry. With the installation complete the CEM AC2000 system is securing Shaw Studios, its employees and its contents. The system has unlimited expansion ability therefore is able to grow as Shaw Studios does.

"The ability to support full Ethernet structure using CEM EtherProx readers in the Shaw Studio Complex was pivotal in the client's decision to use the CEM AC2000 system".
