Data Sheet

AC2000 WEB Personnel Image Export
Cardholder Photo Export Tool

Key Features

- Simple and easy tool for exporting cardholder photographic images
- The personnel image export tool allows cardholder images to be exported by company, department & card format
- Filtering options based on various card status: Current, About to Expire, Lost or Stolen, and expired
- Provides a simple but powerful tool to allow Human Resource systems or card management systems to import cardholder images without image recapture

The AC2000 WEB Personnel Image Export tool allows users to export cardholder photographs to a defined AC2000 folder location for 3rd party systems to extract.

Users can manually export cardholder images from specific companies, departments and card formats along with added filtering for different card statuses, such as: Current Card, About to Expire, Lost or Stolen, Expired.

The photographs are exported as JPG files to a nominated sub folder on the AC2000 system. The user friendly web interface allows the user to specify the filename of the JPG file based on various criteria such as forename, surname, and job title. Up to nine different database fields can be inserted into 6 different field headings.
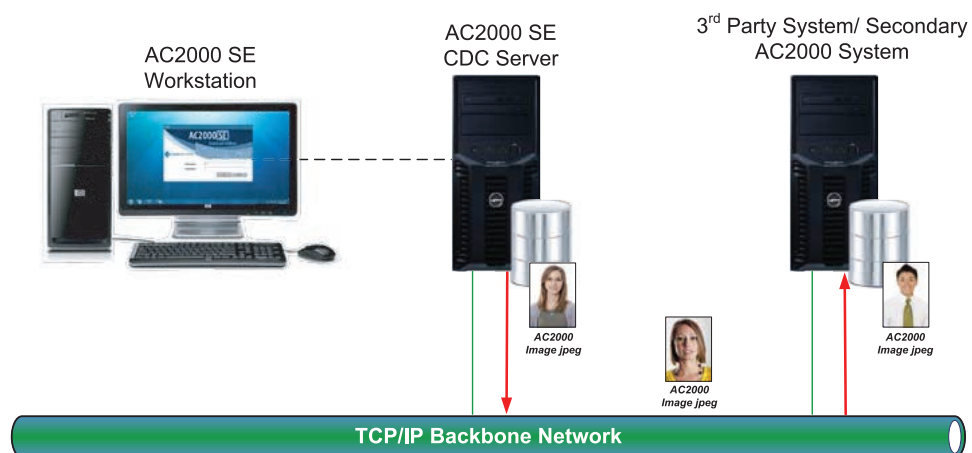

WEB Dashboard Widget Allocation allows for the creation of new groups to which widgets are added. Using the AC2000 WEB Dashboard Widget, groups can now be configured to allow the system administrator to allocate access to specific widgets only to certain AC2000 users. The widget group is then assigned to users via the AC2000 User Options application. This gives greater control over access to certain vital system data and allows for the viewing of this data by authorised personnel only.

Further to this, previously exported photographs stored in the nominated export folder can be overwritten or kept alongside the new ones if required.

The AC2000 WEB Personnel Image Export tool makes it easier for 3rd party systems to extract Images from AC2000. These images can be used in systems ranging from Human Resources, Card Management, Time and Attendance systems, without the requirement for recapturing user images.

Requirements

- AC2000 AE v6.6 & upwards AC2000 SE (Standard Edition)
- v6.6 & upwards
- AC2000 Lite v6.6 & upwards
